

Wilflex™ Originals # 12 Inspiration - Singularity

Both eagerly anticipated and deeply feared is the concept of the technological singularity: the creation of an artificial super-intelligence that will forever change what it means to be human. Though it seems like a concept fit for science fiction, the potential reality of such a merger has already taken root. Computers and machines have permeated every aspect of our lives and for many of us, inspire the hope that we might one day live forever. Will we lose what it means to be human through this assimilation, or simply redefine it?

Originals #12 captures the essence of the Singularity both visually and physically by depicting the convergence of the technological and organic while utilizing products that represent both. The 100% Organic Cotton substrate from Allmade provides a natural canvas to showcase the latest development in our Low Cure Ink technology.

We hope this design and its utilization of our LC Base color system will inspire you to think about your future with Wilflex.

Originals # 12

Specifications

- Garment
100% Organic, Combed, Ringspun Cotton, White by Allmade
- Equipment
